

R.A.C.E. Veneer Grading System

R.A.C.E Veneer Grading Main Screen

A Veneer Grade System at its Best!

The R.A.C.E. Veneer Grading system was designed to assist in the process of manual veneer grading. All data is entered into the system at the grading point, where a unique id is assigned to the veneer which will be used to track it for the rest of the production process.

Many Input Choices

The system allows for the input of all relevant and important data relating to veneer, including log and fitch numbers, veneer species and grade as well as thickness and much more.

Open System Design

We can configure our software to work with your existing onsite systems, increasing the ease of integration and reducing installation costs.

We want to work with you!

R.A.C.E. software has been designed with customisation in mind. With almost 20 years experience in industrial workplaces, we understand that different companies have different requirements for their software, which is why we encourage them to actively work with us so R.A.C.E. can provide the most suitable and effective software solution.

Features:

- Barcode printing for unique identification of each unit (bundle) of veneer
- Simple layout for fast and easy data entry
- 'One Click' grading
- All data recorded for use with the RACE Veneer Measuring and Processing system
- Data able to be ported into any database or back office system
- Designed to be used on RACE Industrial Touch Screens.
